Self-Lubricating LSR for Health Care Applications

Improving the mounting efficiency
Silopren LSR 46X5 SL series is a two-component, self-lubricating liquid silicone rubber for injection molding processes that provides a lubricious surface on the molded part after vulcanization.

Silopren LSR 46X5 SL series can eliminate the need for secondary lubrication processes to reduce the coefficient of friction, which can improve the mounting efficiency of molded parts during the assembly of devices. Delayed lubricant surface bloom after vulcanization helps prevent mold fouling while also improving the longevity of the molded parts and reducing the occurrence of self-healing of slit valves.

Productivity & Performance for Molded Parts
Momentive’s family of liquid silicone rubber materials (LSR) enable health care device designers and equipment manufacturers to introduce improved material features for critical applications such as needle-free access valves, o-rings, stoppers, seals and assembled parts. The Silopren LSR 46X5 SL product family can provide enhanced lubricity for specialized applications requiring a high-slip surface not achievable via traditional silicone molded parts.

Key Features and Typical Benefits
- Biocompatibility: USP CLASS VI and ISO 10993 (parts 5, 6, 10, 11) compliant
- Longer lubricating life: longevity of molded parts & reduced self-healing of valve slits
- Delayed lubricant surface bloom: enables efficient part molding without mold fouling
- Higher slip surface - low coefficient of friction: enables automated assembly of devices
- Enhanced ability for molded parts to glide into mountings
