## Silvet L-77 SUPER SPREADER

### Get the most out of every droplet that leaves the sprayer

Often referred to as an activator adjuvant, Silwet L-77 super spreader can improve the performance of agrochemicals such as fungicides, herbicides and insecticides so you get better weed, pest and disease control.

That's because, just a small dose of Silwet L-77 super spreader added to your spray treatment can help spread your agrochemicals faster and more uniformly – up to 10 times more than conventional surfactants. And, its flexible-uptake system lets you decide whether your active ingredient is deposited on the plant or absorbed into plant tissues to keep your spray treatment working even after rainfall or irrigation.

### **EXCEPTIONAL SPREADING**

**EXCEPTIONAL RAINFASTNESS** 

#### LOW TEMPERATURE USE

#### Exceptional Stomatal Infiltration

# Silwet L-77

Used in the field for more than 35 years in more than 45 countries, Silwet adjuvants have earned their reputation for helping take crop protection to the next level with maximized coverage and spray treatment effectiveness.

#### Key product features and typical benefits include:

- Increased yield and improved crop quality through enhanced spray application performance
   Up to 10x more spreading\*
- Rapid absorption through even tough, waxy grasses\*
  Gets active ingredient where it's needed most
- Uptake into a range of broadleaves with typical spray volume of 0.015% and 0.15%\*
- Rainfastness of 2 minutes or less\*
  So spray treatment can retain effectiveness despite the weather
- Reduced waste via enhanced deposition, coverage and retention on plant surface with appropriate spray volume\*
   More spray retained on the plant; less spray ends up on the ground
- Outstanding coverage with low spray volume (rates between 0.025% and 0.1%)\*
  Treat more area with less volume
- Compatibility with both foliar and drip applications for orchards, vegetables and row crops
- OMRI Listed for organic use, BCS listed and EPA 40 CFR §180.910 inert status
