

AgroSpred* 100

AgroSpred* 100

Description

AgroSpred 100 wetter is a new surfactant to consider for a potentially, cost-effective “tank-mix” spray adjuvant for many agricultural applications.

AgroSpred 100 wetter may be considered as a replacement for Nonylphenol Ethoxylate (NPE) surfactants, the use of which has been banned and/or phased out for agriculture and other applications by government regulation in some jurisdictions.

AgroSpred 100 wetter is based on surface chemistry that can help promote increased spreading performance compared to NPE and other conventional surfactants. Excellent spreading typically means better spray coverage on difficult-to-wet foliar surfaces. This important benefit can help conserve water and promote more efficient use of pesticide treatments as compared with NPE based adjuvants formerly used in many crops.

Key Features and Benefits

Typically, AgroSpred 100 wetter effectively reduces the surface tension of spray mixtures to levels below that observed with conventional NPE based adjuvants. Typical recommended starting levels are 0.05% concentration.

- Faster response compared to NPE surfactants
- Enhanced spreading compared to NPE (1.5X NPE)
- Potentially more cost-effective, due to lower rate compared to NPE

Typical Physical Properties

Appearance	Colorless to light yellow
Viscosity @ 25°C, cSt	65
Surface Tension (0.1%) mN/m	26
Pour Point, °C	<0
Flash Point, PMCC, °C	213
Specific Gravity @ 15°C	1.00

Potential Applications

AgroSpre^d 100 wetter may be considered for use as a spray adjuvant component in many agrochemical products and treatments. As a tank-side spray adjuvant, optimum performance may be achieved when spray mixtures are between pH 5.0 and 8.0, and used within 24 hours of preparation. Typical tank-mix use levels range from 0.025% to 0.1% depending on the spray treatment.

For use in neutral **in-can** formulations (pH 6.5 to pH 7.5), it is recommended that AgroSpre^d 100 wetter be included in the formulation at a level sufficient to deliver between 0.025% to 0.1% in the spray mixture upon dilution.

Processing Recommendations

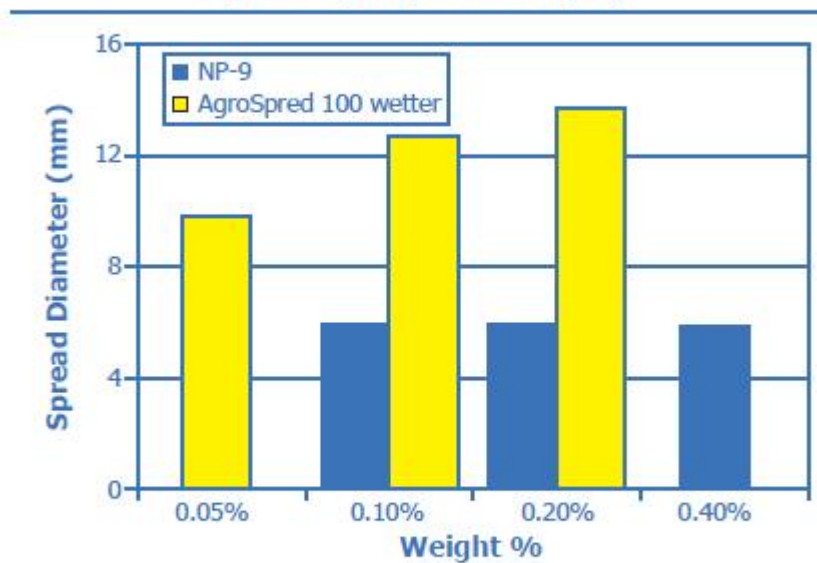

Typical nonylphenol surfactants are well known for their use as wetting agents, dispersants and emulsifiers in pesticide formulations. However, as some reports link nonylphenol to potential health and environmental hazards, formulators are considering alternative adjuvants for Ag products.

AgroSpre^d 100 wetter is an excellent candidate to consider for replacing NPEs. It typically offers better wetting than NPE, which may enable use at half the formulation amount than that of a typical NPE surfactant.
