SilFORT* PHC587B

Description
SilFORT PHC587B premium-performance hard coat is a clear, non-yellowing silicone coating that provides optimal protection against deterioration from weather, including ultraviolet rays, heat, cold, rain, snow and ice comparable to Momentive Performance Materials SilFORT AS4000. It also resists damage from sand and dirt. Additionally, SilFORT PHC587B provides improved productivity with primerless adhesion coupled with faster curing at 130°C. There is no need for a primer coat. SilFORT PHC587B complies with the ECE Automotive Regulations for European forward lighting applications.

Key Features and Benefits
- Ultraviolet resistance
- Thermal resistance
- Abrasion and mar resistance
- Good clarity
- Solvent/chemical resistance
- Primerless adhesion to polycarbonate
- Single coating process step

Typical Physical Properties

**Containers**

25 kg steel pail

**Patent Status**

Standard copy to come

**Product Safety, Handling and Storage**

**CAUTION**

Compatibility of Momentive Performance Materials hard coat and polycarbonate resin, including Momentive Performance Materials® resin, is dependent on a number of factors including operational stresses, chemical exposure, temperature levels, impact and exposure to ultraviolet light.
While it is up to the end user to determine what application specific testing is appropriate, it is suggested that all polycarbonate resin applications be tested for at least thirty (30) days for compatibility and crazing with this hard coat use. There is no dependable substitute for careful testing of prototypes of production parts in typical operating environments.

Refrigeration is required.

The warranty period is 3 months from date of shipment from Momentive Performance Materials if stored in the original unopened container at 4 - 10° C.

Preparation From Cold Storage

Allow SilFORT PHC587B to return to room temperature in original container. When the coating reaches 15° C, gently mix the coating to re-constitute any material that may have separated. Solution should appear homogeneous at room temperature.

Standard copy to come

Processing Recommendations

General Requirements

Coating area should be clean, dust-free (Class 10,000 or better), well-ventilated and with the relative humidity controlled to 40 ± 10%. Only if necessary, parts may be washed or wiped clean with isopropyl alcohol, a mild detergent solution and clean water rinse, or ultrasonic bath followed by a filtered-air blowoff and a final ionized-air blow-off. Cleanliness is critical for the production of good parts. Coating solution should be filtered continuously or just prior to use to approximately 0.5 to 1.0 µm, using a 5 to 8 µm prefilter. Electric or indirect gas-fired ovens with good temperature distribution and air exchange are recommended.

SilFORT PHC587B Hard Coat

The hard coat can be applied to parts by dip, spray, or flow coating methods. For spray applications and largepart flow coating, SilFORT PHC587B can be reduced if desired with an appropriate solvent (e.g. 2-propanol, 1-butanol). Coating should be applied to
result in a dry film thickness of 6 - 8 µm or thicker, depending on application. The coating should be allowed to dry at room temperature until tack free for approximately 5 to 10 minutes depending on the part size.

**Curing**

After the part reaches a temperature of 130°C (266°F) SilFORT PHC587B cures to an abrasion resistant hard coat in 30 minutes.

**Limitations**

Standard copy to come
